                                                                                                                     Recombinant retrovirus vector, contg. non-retroviral gene, - has ability to produce progeny virus, in helper cell which can infect host cell and form provirus

From the page 17; 28pp; English.

The universal retroviral vector pPoll5-R1 (given in 076041) was obtained by replacing the SV40 promoter and hpt gene of pPoll1-R1 (Q76038) with the multiple cloning site of pBluescript II KS. The vectors allow cell-type specific gene expression and eliminate risks of downstream activation of cellular proto-oncogenes.

                                                                                                            Tability to produce progeny virus, in helper cell which can infect in strong tell and form provirus and produce progeny virus, in helper cell which can infect is Example; Page 16-17; 28pp; English.

New recombination-free, highly efficient retroviral vectors (ppolli-R1 (given in 076038), ppolli-R2 (076039) and ppolli-R3 (076040) were obtained by replacing the U3 region of the left LTR of spleen necrosis virus with the IE promoter/enhancer of CMV and extension of the encapsidation region. The vectors allow cell-type specific gene expression and eliminate risks of downstream activation of cellular proto-oncogenes.

                                                                                                                                                                                                                                                                                                                                    PT New isolated nucleic acid encoding plant ADA2 transcription activator used for regulating expression of genes in plants and to free for specific inhibitors, potentially useful as herbicides of from phaseous sequence encodes the ADA2 transcription adapter isolated for sequences. Transfecting cells which characterized are chimeric genes comprising of a the ADA2 nucleic acid sequence operably linked to suitable regulatory to reduce expression of particularly to reduce expression of particular genes can be used: (1) to compare the following protein, compared by factors with which ADA2 includes protein, compared by factors with which ADA2 increase protein, compared by factors with which ADA2 interact; and (ii) to compare the ADA2 nucleic acid sequence or suppression of genes containing promoters or to incompounds that inhibit ADA2, potentially useful as herbicides. The ADA2 nucleic acid sequence (or synthetic primers based or mapping genes (e.g. for plant breeding) or to identify promoters for mapping genes (e.g. for plant breeding) or to identify loss of function sequence is 1812 Bp; 613 A; 318 C; 404 G; 477 T;

Expression promoter for genes inserted into plant seeds - e.g. heat-resistant beta-amylase gene inserted into barley seeds

Example 6; Page 20-21; 33pp; Japanese.

T62572 is a DNA molecule comprising a heat resistant promoter derived from a barley beta-amylase (EC 3.2.1.2) gene and other sequences used for integration of this promoter into a reporter plasmid. The plasmid is used for the production of transgenic barley plants and seeds. Such plants and seeds have improved maturation properties. Sequence 2142 BP; 651 A; 482 C; 395 G; 614 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Barley;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    NOTE: This is a 'working draft' sequence. It currently consists of 14 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 complete sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                21-DEC-1999
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             196
                                                                                                                                                                                                                                                                                                                    Louis,
```

NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

MAPPING INFORMATION:

The sequence of this clone was established as part of a mapping and sequencing collaboration between the NHGRI Chromosome 7 Mapping sequencing collaboration between the NHGRI Chromosome 7 Mapping sequencing ceren, Director), John D. McPherson in the project (Eric D. Green, Director), John D. McPherson in the Department of Genetics (Washington University), and the Washington University Genome Sequencing Center. For additional information University Genome Sequencing Center. For additional information about the map position of this sequence, see about the map position of this sequence, see

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        NEIGHBORING SEQUENCE INFORMATION:
The clone sequenced to the left is RP5-1161G23, 200 bp overlap.
Actual start of this clone is at base position 83123 of
RP5-1161G23; actual end is at 70480 of RP5-909F12.

                                                                                                                                                                                                                                                               NOTE: This is a 'working draft' sequence. It currently consists of 18 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
